Core benefits of Mobile Stock and Inventory:

Improved inventory accuracy

Real-time updates with on-the-spot bar code scanning to reduce errors and stock discrepancies, enabling more accurate inventory that improves forecasting and replenishment while minimising overstock and understock situations.

Faster stock decision-making

Real-time alerts and notifications, provide immediate insights into stock levels, trends, and performance, enabling managers to make informed decisions on promotions, markdowns, and replenishment. Efficiently restocking from warehouses or other store locations.

Increased sales opportunities

Faster product location with instant availability checks mean fewer missed sales due to stockouts or delays. Unlocking omnichannel capabilities by selling products not physically in store via mobile ordering.

Operational efficiency

By reducing time spent on manual stock checks and paperwork, staff are free to focus on customer service and sales, boosting overall productivity.

Cost savings

Minimise excess inventory, complete mobile audits, increase staff visibility in the store, by combining multiple mobile applications to operate more flexibly and efficiently.

Reduced shrinkage and loss

Enhanced tracking and visibility accelerate the detection of theft, damage, or misplacement, while supporting compliance and audit readiness.

Enhanced customer experience

Staff are free to assist customers more effectively, reducing friction for time-sensitive purchases, leading to higher satisfaction and loyalty.
